Dr. Rogers Prize Coordinator
C/O #502 - 325 Howe Street
Vancouver, BC. V6C 1Z7, CANADA

Gentlemen,

I would like to support the nomination of Gaston Naessens for the Dr. Rogers Prize.

I served for 12 years in the United States Congress, and I am the founder and President of the Foundation for Alternative and Integrative Medicine, (FAIM.org).

Several years ago I was diagnosed with prostate cancer, which had expanded beyond my prostate. I went through two series of 714-X injections, which I gave myself, according to Gaston's suggestion. That was more than 20 years ago, and I have been free of cancer during this entire time. As a result of this, I have had the opportunity to observe his exciting research.

Cancer is a major problem to the people of the world. The work which Gaston has done to better understand the science of cancer and other diseases is of immense importance. It helps explain how one can diagnose disease and health by looking at the blood through his unique microscope.

Some of the greatest discoveries of the past have come from scientists working in their individual homes or workshops, rather than from giant corporations. The work which Gaston Naessens has done with his unique microscope in helping the world to understand and diagnose health and disease is of tremendous importance, and I hope it will be properly recognized for the important discovery it is as you consider him for the Dr. Rogers Prize.

Sincerely submitted,

Berkley Bedell
