To Whom it May Concern

I have known Gaston Naessens for 23 years. I have closely followed his research over those years and have personally witnessed the profound health changes that his discoveries have made possible. His enormous contributions to the complementary health care field transcend and percolate into the disciplines of microbiology, immunology, toxicology and pharmacotherapeutics.

Having served as Programs Chairman for the International Academy of Oral Medicine and Toxicology, I have been fortunate to have Mr. Naessens present his research twice to hundreds of our medical, dental and research scientist members. His Somatidian Orthobiological discoveries have been embraced and utilized by many of our professional clinicians and research scientists to allow breakthroughs in their own fields for the betterment of mankind.

The results of this collaboration include, for example, new methods of testing The immunological effects of dental materials by viewing the live blood from exposed patients under Naessens' modified darkfield microscopy. At our next scientific conference we will – for the first time – explore how this technology dovetails with the National Institutes of Health's Human Micro Biome Project.

Pasteur's germ theory may adequately explain how certain infectious diseases can spread within a vulnerable population. But Pasteur's 19th century theory offers us little insight into the mechanisms of chronic degenerative disease –

the source of the majority of the disabling and fatal diseases afflicting 21st century man.

Naessens' Somatidian Orthobiological principles not only help reveal the mechanism of degenerative diseases, but they also can help predict and prevent their onset. His microscopic interpretation of patients' blood can also assess how well their treatment is working.

Homeopathic physicians have long taught us that "A person is not sick because he has tuberculosis – he gets tuberculosis because he is sick!"

Naessens' work provides a practical framework to predict, prevent, and treat those chronic diseases which threaten mankind today.

This is the genius of Gaston Naessens! Combining visionary insights with his unwavering integrity and commitment to relieve human suffering make Gaston Naessens stand out as a scientist and a humanitarian with few historical peers.

Sincerely,

Richard D. Fischer, DDS, FAGD, MIAOMT

Past President, IAOMT
