

## 714X IN A NUTSHELL

- 1- 714X is an innovative, non-toxic health product that acts on the immune system and other body's natural defense mechanisms. The product is indicated in health conditions where the immune system is weakened or exacerbated. It is for this reason that 714X is categorized as an *immunomodulatory* health product.
- 2- 714X acts initially on the *biological terrain* by liquefying the lymph. Afterwards, it will act on the blood cells, especially on the white blood cells. The product does not aim to destroy the anarchic cell, but rather to restore the body's intrinsic ability to defend itself. The product can also be used preventively because, due to its unique mode of action, it ensures the balance of the *biological terrain*.
- 3- 714X, intended to reach the large lymphatic circulation, is introduced as a self-injection into the lymph node area of the right groin.

When indicated, the product can also be administered by inhalation to reach the small lymphatic circulation.

*Please note that these two methods of administration will be presented to you in detail in the user guide provided by the manufacturer when purchasing the product.*

- 4- A cycle of 714X injections takes place over a period of 21 consecutive days with 2 days off between each cycle. In most cases, 6 to 8 cycles may be minimally required to reach the balance of the *biological terrain*. In preventive mode, 2 cycles per year are recommended to maintain this balance.
- 5- 714X is a sterile product with no side effects. The product does not contain any foreign proteins and, therefore, does not carry any risk of allergy or anaphylactic shock. That's why it can be safely used by people of all ages: babies, children, teenagers and adults, including the elderly and vulnerable.
- 6- To help you take charge of your own health, the manufacturer encourages the self-injection of the 714X. However, in certain circumstances, if there is a constraint on dexterity or fine motor skills, the user can call on a close one to assist him in his daily injection session.

7- 714X has been manufactured in Canada for over 40 years. Since its entry into Health Canada's Special Access Program (SAP) in December 1989, more than 22,000 authorizations have been granted to Canadian patients. Non-Canadian patients may import this health product for personal use in accordance with the import standards and regulations in force in their country of residence.
